

Analyse

Søgestrengene anvendt i den bibliometriske analyse af rumbaseret grøn forskning

Dette dokument indeholder tekstversionen af søgestrengen for rumbaseret grøn forskning og søgestrengen for grøn forskning med de faktiske koder anvendt i Scopus-databasen.

Datagrundlaget for den bibliometriske analyse af rumbaseret grøn forskning er defineret på baggrund af en søgestreng for rumbaseret grøn forskning, som er en kombination af Uddannelses- og Forskningsministeriets søgestreng for grøn forskning og en søgestreng til identifikation af rumbaseret forskning med fokus på rumbaseret grøn forskning. Det vil sige, at rumsøgestrengen er udarbejdet med fokus på at fange grøn rumforskning af relevans for Jorden og ikke generel forskning i universet. F.eks. er klassisk astrofysik ikke dækket i fuldt omfang. Rumsøgestrengen skal udvikles yderligere, hvis den skal bruges til at fange rumforskning samlet set.

Søgestrengene er udarbejdet til søgning i Elseviers Scopus-database¹. Der søges i publikationernes titel, *abstract* og *author keywords* (forfatterens egne nøgleord) samt i publikationstyperne artikler (ar), reviews (re) og konferencebidrag (cp).

Den bibliometriske analyse af rumbaseret grøn forskning er afgrænset til publikationsårene 2011-2020 og Danmark. For sammenligningslandene er anvendt samme søgestreng blot afgrænset på de konkrete lande.

I afsnit 1.1.1 herunder er vist søgestrengen for rumbaseret grøn forskning (kombinationen af søgestrengen for grøn forskning og søgestrengen for rumbaseret forskning), mens søgestrengen for grøn forskning alene er vist i afsnit 1.1.2. Der er vist den faktiske kode anvendt i Scopus-databasen.
